WaveLynx Technologies Corporation

TEST REPORT FOR

Ethos Models: ET10-1, ET10-3, ET10-5, and ET10-7

Tested To The Following Standards:

FCC Part 15 Subpart C Sections:

15.207 & 15.209

Report No.: 97029-32

Date of issue: May 24, 2016

This test report bears the accreditation symbol indicating that the testing performed herein meets the test and reporting requirements of ISO/IEC 17025 under the applicable scope of EMC testing for CKC Laboratories, Inc.

We strive to create long-term, trust based relationships by providing sound, adaptive, customer first testing services. We embrace each of our customers' unique EMC challenges, not as an interruption to set processes, but rather as the reason we are in business.

This report contains a total of 77 pages and may be reproduced in full only. Partial reproduction may only be done with the written consent of CKC Laboratories, Inc.

Test Report Information

REPORT PREPARED FOR: REPORT PREPARED BY:

WaveLynx Technologies Corporation Terri Rayle
12303 Airport Way, Suite 200 CKC Laboratories, Inc.
Broomfield, CO 80021 5046 Sierra Pines Drive
Mariposa, CA 95338

REPRESENTATIVE: Daniel Field Project Number: 97029

Customer Reference Number: CKPO030916

DATE OF EQUIPMENT RECEIPT: March 14, 2016

DATE(S) OF TESTING: March 14 - May 10, 2016

Report Authorization

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the sample equipment tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

Steve Behm

Director of Quality Assurance & Engineering Services CKC Laboratories, Inc.

Test Facility Information

Our laboratories are configured to effectively test a wide variety of product types. CKC utilizes first class test equipment, anechoic chambers, data acquisition and information services to create accurate, repeatable and affordable test results.

SUMMARY OF RESULTS

Standard / Specification: FCC Part 15 Subpart C - 15.209

Test Procedure	Description	Modifications	Results
15.215(c)	Occupied Bandwidth	NA	Pass
15.209	Field Strength of Fundamental	NA	Pass
15.209	Field Strength of Spurious Emissions	NA	Pass
15.207	AC Conducted Emissions	NA	Pass

NA = Not Applicable

Modifications During Testing

This list is a summary of the modifications made to the equipment during testing.

Summary of Conditions	
No modifications were made during testing.	

Modifications listed above must be incorporated into all production units.

Conditions During Testing

This list is a summary of the conditions noted to the equipment during testing.

Summary of Conditions		
None

Radiated Emissions Fundamental Measurements

Temperature: 10°C Humidity:86%

Atmospheric Pressure: 98.0 kPa

Method: ANSI C63.10 2013

Antenna Type: Integral Modulation: CW

The EUT is powered by a DC power supply at 12VDC.

Max power was measured in two orthogonalities.

125kHz Only – Measured in X-Axis

The Fundamental measurements were performed in the worst case orientation observed during the fundamental power measurements.

The manufacturer declares it will only ever be wall mounted in an upright (Y-axis) or sideways (X-axis) orientation.

The EUT is setup on an 80cm foam block.

The EUT has been programmed to continuously transmit the RFID signal at 125kHz.

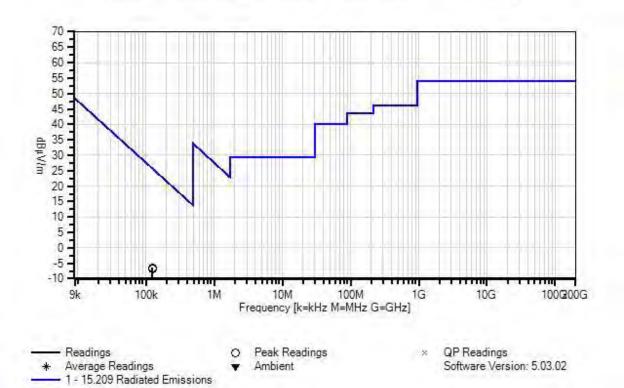

Measurements will be made in both orientations as well as with the voltage variation of 11.2VDC and 13.8VDC

(+/-15% of nominal).

Device	Manufacturer	Model #	S/N	
Configuration 7				

Test Conditions / Notes:

Radiated Emissions Fundamental Measurements

Temperature: 11°C Humidity: 85%

Atmospheric Pressure: 100.8 kPa

Method: ANSI C63.10 2013

Antenna Type: Integral Modulation: CW

The EUT is powered by a DC power supply at 12VDC.

Max power was measured in two orthogonalities.

Set for 125kHz- Measured in X-Axis

The Fundamental measurements were performed in the worst case orientation observed during the fundamental power measurements.

The manufacturer declares it will only ever be wall mounted in an upright (Y-axis) or sideways (X-axis) orientation.

The EUT is setup on an 80cm foam block. This EUT has both 125kHz and 13.56MHz.

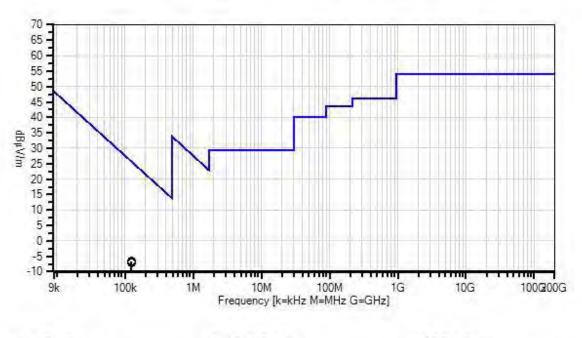

The EUT has been programmed to continuously transmit the RFID signal at 125kHz.

Measurements will be made in both orientations as well as with the voltage variation of 11.2VDC and 13.8VDC (+/-15% of nominal)..

Device Manufacturer Model # S/N
Configuration 8

Test Conditions / Notes:

Radiated Emissions Spurious Measurements 9kHz - 30MHz

Temperature: 10.6°C Humidity: 62%

Atmospheric Pressure: 98.2 kPa

Method: ANSI C63.10 2013

Highest Generated Frequency (Configuration 1): 8MHz Highest Generated Frequency (Configuration 3): 27.12 MHz

Both EUTs are running at 125kHz.

The EUT is powered by a DC power supply at 12VDC.

Spurious was measured on two EUTs at one time.

Configuration 8 is made up of Configuration 1 and Configuration 3 (Testing at the same time).

Configuration 1 is in X-axis and Configuration 3 is in the Y-axis.

Preliminary measurements of the fundamental were taken in two orientations. The orientation that displayed the highest emissions was the orientation used for radiated spurious emissions.

The manufacturer declares it will only ever be wall mounted in an upright (Y-axis) or sideways (X-axis) orientation.

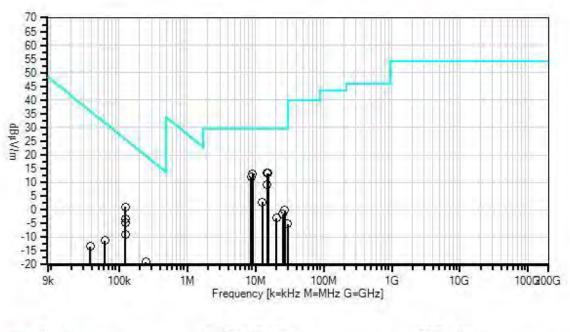

The EUT is setup on an 0.80 meter foam block.

The EUT is setup to continuously transmit at 125kHz

Test Location: CKC Laboratories Inc. • 5046 Sierra Pines Dr. • Mariposa, CA 95338 • 209-966-5240

Customer: WaveLynx Technologies Corporation

Specification: 15.209 Radiated Emissions

Work Order #: 97029 Date: 3/22/2016
Test Type: Radiated Scan Time: 14:17:51
Tested By: Benny Lovan Sequence#: 7

Software: EMITest 5.03.02

Equipment Tested:

Device	Manufacturer	Model #	S/N	
Configuration 9				

Support Equipment:

Device	Manufacturer	Model #	S/N	
Configuration 9				

Test Conditions / Notes:

Radiated Emissions Spurious Measurements 9kHz - 30MHz

Temperature: 10.6°C Humidity: 62%

Atmospheric Pressure: 98.2 kPa

Method: ANSI C63.10 2013

Highest Generated Frequency (Configuration 5): 8MHz Highest Generated Frequency (Configuration 7): 27.12 MHz

Both EUTs running at 125kHz.

The EUT is powered by a DC power supply at 12VDC.

Spurious was measured on two EUTs at one time.

Configuration 9 is made up of Configuration 5 and Configuration 7 (Testing at the same time).

Configuration 5 is in Y-axis and Configuration -7 is in the X-axis.

Preliminary measurements of the fundamental were taken in two orientations. The orientation that displayed the highest emissions was the orientation used for radiated spurious emissions.

The manufacturer declares it will only ever be wall mounted in an upright (Y-axis) or sideways (X-axis) orientation.

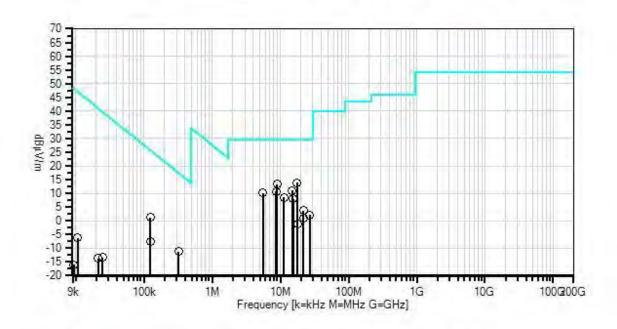

The EUT is setup on an 0.80 meter foam block.

The EUT is setup to continuously transmit at 125kHz

Page 35 of 77 Report No.: 97029-32

Page 37 of 77 Report No.: 97029-32

Test Location: CKC Laboratories Inc. • 5046 Sierra Pines Dr. • Mariposa, CA 95338 • 209-966-5240

Customer: WaveLynx Technologies Corporation

Specification: 15.209 Radiated Emissions

Work Order #: 97029 Date: 3/23/2016
Test Type: Radiated Scan Time: 09:43:02
Tested By: Benny Lovan Sequence#: 8

Software: EMITest 5.03.02

Equipment Tested:

Device	Manufacturer	Model #	S/N	
Configuration 9				

Support Equipment:

Device	Manufacturer	Model #	S/N	
Configuration 9				

Test Conditions / Notes:

Radiated Emissions Spurious Measurements 30MHz -1GHz

Temperature: 10.5°C Humidity: 57%

Atmospheric Pressure: 98.5 kPa

Method: ANSI C63.10 2013

Highest Generated Frequency (Configuration 5): 8MHz Highest Generated Frequency (Configuration 7): 27.12 MHz

Both EUTs are running at 125kHz.

The EUT is powered by a DC power supply at 12VDC.

Spurious was measured on two EUTs at one time.

Configuration 9 is made up of Configuration 5 and Configuration 7 (Testing at the same time).

Configuration 5 is in Y-axis and Configuration -7 is in the X-axis.

Preliminary measurements of the fundamental were taken in two orientations. The orientation that displayed the highest emissions was the orientation used for radiated spurious emissions.

The manufacturer declares it will only ever be wall mounted in an upright (Y-axis) or sideways (X-axis) orientation.

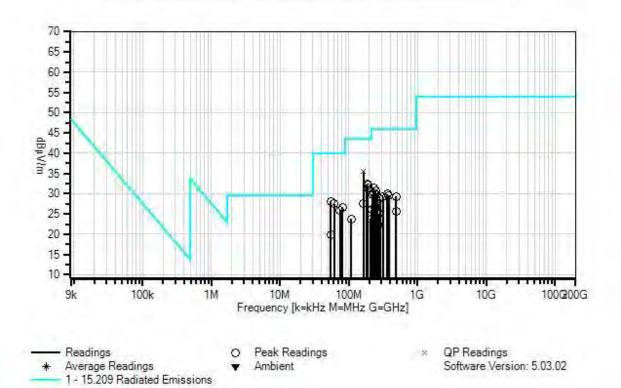

The EUT is setup on an 0.80 meter foam block.

The EUT is setup to continuously transmit at 125kHz

Configuration 9

15.207 AC Conducted Emissions

Test Setup / Conditions / Data

Test Location: CKC Laboratories, Inc. • 5046 Sierra Pines Drive • Mariposa, CA 95338 • (209) 966-5240

Customer: WaveLynx Technologies Corporation.

Specification: 15.207 AC Mains - Average

Work Order #: 97029 Date: 5/10/2016
Test Type: Conducted Emissions Time: 9:25:27 AM

Tested By: Skip Doyle / Benny Lovan Sequence#: 1

Software: EMITest 5.03.02 120V 60Hz

Equipment Tested:

Device Manufacturer Model # S/N
Configuration 1

Support Equipment:

Device Manufacturer Model # S/N
Configuration 1

Test Conditions / Notes:

Test Method: ANSI C63.10 (2013)

Frequency Range of Interest:

0.150-30MHz

RBW = 9kHz; VBW > 9kHz

Environmental Conditions: Temperature: 21°C Relative Humidity: 67% Atmospheric Pressure: 97.5kPa

Highest Generated Frequency: 27.12 MHz

The EUT is running at 125kHz.

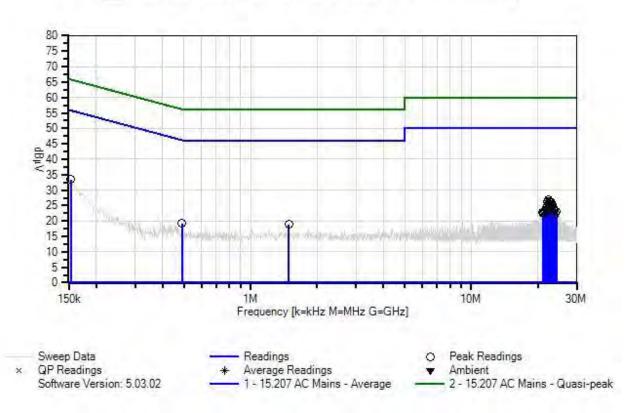

The EUT is powered by a DC power supply at 12VDC. The EUT is setup to continuously transmit at 125kHz.

AC Conducted Emissions is being performed on the AC portion of the AC/DC supply.

Page 50 of 77 Report No.: 97029-32

Test Location: CKC Laboratories, Inc. • 5046 Sierra Pines Drive • Mariposa, CA 95338 • (209) 966-5240

Customer: WaveLynx Technologies Corporation.

Specification: 15.207 AC Mains - Average

Work Order #: 97029 Date: 5/10/2016
Test Type: Conducted Emissions Time: 10:04:57 AM

Tested By: Skip Doyle / Benny Lovan Sequence#: 8

Software: EMITest 5.03.02 120V 60Hz

Equipment Tested:

Device Manufacturer Model # S/N
Configuration 3

Support Equipment:

Device Manufacturer Model # S/N
Configuration 3

Test Conditions / Notes:

Test Method: ANSI C63.10 (2013)

Frequency Range of Interest:

0.150-30MHz

RBW = 9kHz; VBW > 9kHz

Environmental Conditions: Temperature: 21°C Relative Humidity: 67% Atmospheric Pressure: 97.5kPa

Highest Generated Frequency: 27.12 MHz

The EUT is running at 125kHz.

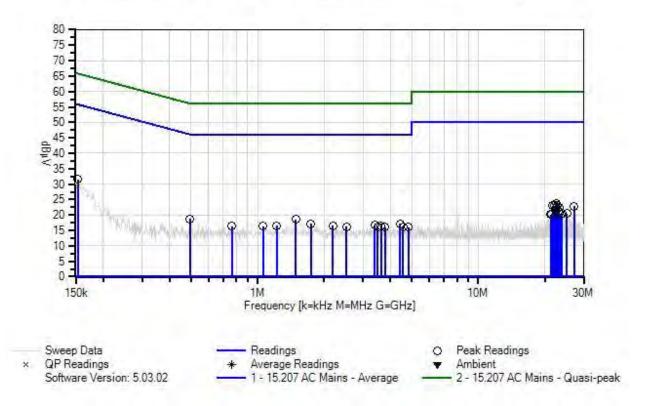

The EUT is powered by a DC power supply at 12VDC. The EUT is setup to continuously transmit at 125kHz.

AC Conducted Emissions is being performed on the AC portion of the AC/DC supply.

Page 58 of 77 Report No.: 97029-32

Test Location: CKC Laboratories, Inc. • 5046 Sierra Pines Drive • Mariposa, CA 95338 • (209) 966-5240

Customer: WaveLynx Technologies Corporation.

Specification: 15.207 AC Mains - Average

 Work Order #:
 97029
 Date: 5/10/2016

 Test Type:
 Conducted Emissions
 Time: 10:08:10 AM

Tested By: Skip Doyle / Benny Lovan Sequence#: 9

Software: EMITest 5.03.02 120V 60Hz

Equipment Tested:

Device Manufacturer Model # S/N
Configuration 5

Support Equipment:

Device Manufacturer Model # S/N
Configuration 5

Test Conditions / Notes:

Test Method: ANSI C63.10 (2013)

Frequency Range of Interest:

0.150-30MHz

RBW = 9kHz; VBW > 9kHz

Environmental Conditions: Temperature: 21°C Relative Humidity: 67% Atmospheric Pressure: 97.5kPa

Highest Generated Frequency: 27.12 MHz

The EUT is running at 125kHz.

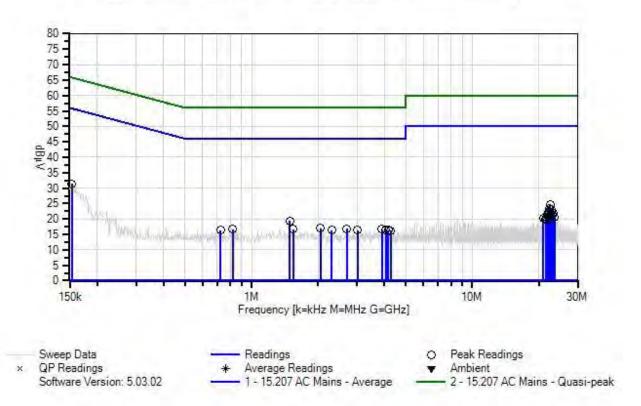

The EUT is powered by a DC power supply at 12VDC. The EUT is setup to continuously transmit at 125kHz.

AC Conducted Emissions is being performed on the AC portion of the AC/DC supply.

WaveLynx Technologies Corporation. Customer:

Specification: 15.207 AC Mains - Average

Work Order #: Date: 5/10/2016 97029 Time: 10:45:42 AM Test Type: **Conducted Emissions**

Skip Doyle / Benny Lovan Tested By: Sequence#: 16

Software: EMITest 5.03.02 120V 60Hz

Equipment Tested:

Device Model # S/N Manufacturer Configuration 7

Support Equipment:

Manufacturer Device Model # S/N Configuration 7

Test Conditions / Notes:

Test Method: ANSI C63.10 (2013)

Frequency Range of Interest:

0.150-30MHz

RBW = 9kHz; VBW > 9kHz

Environmental Conditions: Temperature: 21°C Relative Humidity: 67% Atmospheric Pressure: 97.5kPa

Highest Generated Frequency: 27.12 MHz

The EUT is running at 125kHz.

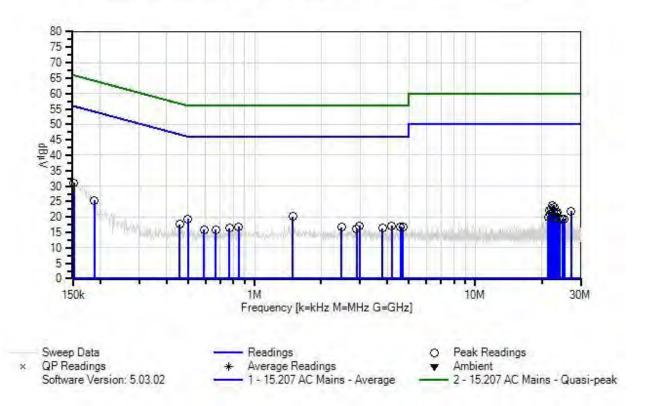

The EUT is powered by a DC power supply at 12VDC. The EUT is setup to continuously transmit at 125kHz.

AC Conducted Emissions is being performed on the AC portion of the AC/DC supply.

Test Setup Photos

SUPPLEMENTAL INFORMATION

Measurement Uncertainty

Uncertainty Value	Parameter
4.73 dB	Radiated Emissions
3.34 dB	Mains Conducted Emissions
3.30 dB	Disturbance Power

Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k=2. Compliance is deemed to occur provided measurements are below the specified limits.

Emissions Test Details

TESTING PARAMETERS

Unless otherwise indicated, the following configuration parameters are used for equipment setup: The cables were routed consistent with the typical application by varying the configuration of the test sample. Interface cables were connected to the available ports of the test unit. The effect of varying the position of the cables was investigated to find the configuration that produced maximum emissions. Cables were of the type and length specified in the individual requirements. The length of cable that produced maximum emissions was selected.

The equipment under test (EUT) was set up in a manner that represented its normal use, as shown in the setup photographs. Any special conditions required for the EUT to operate normally are identified in the comments that accompany the emissions tables.

The emissions data was taken with a spectrum analyzer or receiver. Incorporating the applicable correction factors for distance, antenna, cable loss and amplifier gain, the data was reduced as shown in the table below. The corrected data was then compared to the applicable emission limits. Preliminary and final measurements were taken in order to ensure that all emissions from the EUT were found and maximized.

CORRECTION FACTORS

The basic spectrum analyzer reading was converted using correction factors as shown in the highest emissions readings in the tables. For radiated emissions in $dB\mu V/m$, the spectrum analyzer reading in $dB\mu V$ was corrected by using the following formula. This reading was then compared to the applicable specification limit. Individual measurements were compared with the displayed limit value in the margin column. The margin was calculated based on the limit value subtracting the corrected measured value; a negative margin represents a measurement less than the limit while a positive margin represents a measurement exceeding the limit.

	SAMPLE CALCULATIONS									
	Meter reading (dBμV)									
+	Antenna Factor	(dB/m)								
+	Cable Loss	(dB)								
-	Distance Correction	(dB)								
-	Preamplifier Gain	(dB)								
=	Corrected Reading	(dBμV/m)

TEST INSTRUMENTATION AND ANALYZER SETTINGS

The test instrumentation and equipment listed were used to collect the emissions data. A spectrum analyzer or receiver was used for all measurements. Unless otherwise specified, the following table shows the measuring equipment bandwidth settings that were used in designated frequency bands. For testing emissions, an appropriate reference level and a vertical scale size of 10 dB per division were used.

MEASURING EQUIPMENT BANDWIDTH SETTINGS PER FREQUENCY RANGE							
TEST	BEGINNING FREQUENCY	ENDING FREQUENCY	BANDWIDTH SETTING				
CONDUCTED EMISSIONS	150 kHz	30 MHz	9 kHz				
RADIATED EMISSIONS	9 kHz	150 kHz	200 Hz				
RADIATED EMISSIONS	150 kHz	30 MHz	9 kHz				
RADIATED EMISSIONS	30 MHz	1000 MHz	120 kHz				
RADIATED EMISSIONS	1000 MHz	>1 GHz	1 MHz				

SPECTRUM ANALYZER/RECEIVER DETECTOR FUNCTIONS

The notes that accompany the measurements contained in the emissions tables indicate the type of detector function used to obtain the given readings. Unless otherwise noted, all readings were made in the "positive peak" detector mode. Whenever a "quasi-peak" or "average" reading was recorded, the measurement was annotated with a "QP" or an "Ave" on the appropriate rows of the data sheets. In cases where quasi-peak or average limits were employed and data exists for multiple measurement types for the same frequency then the peak measurement was retained in the report for reference, however the numbering for the affected row was removed and an arrow or caret ("^") was placed in the far left-hand column indicating that the row above takes precedence for comparison to the limit. The following paragraphs describe in more detail the detector functions and when they were used to obtain the emissions data.

Peak

In this mode, the spectrum analyzer or receiver recorded all emissions at their peak value as the frequency band selected was scanned. By combining this function with another feature called "peak hold," the measurement device had the ability to measure intermittent or low duty cycle transient emission peak levels. In this mode the measuring device made a slow scan across the frequency band selected and measured the peak emission value found at each frequency across the band.

Quasi-Peak

Quasi-peak measurements were taken using the quasi-peak detector when the true peak values exceeded or were within 2 dB of a quasi-peak specification limit. Additional QP measurements may have been taken at the discretion of the operator.

Average

Average measurements were taken using the average detector when the true peak values exceeded or were within 2 dB of an average specification limit. Additional average measurements may have been taken at the discretion of the operator. If the specification or test procedure requires trace averaging, then the averaging was performed using 100 samples or as required by the specification. All other average measurements are performed using video bandwidth averaging. To make these measurements, the test engineer reduces the video bandwidth on the measuring device until the modulation of the signal is filtered out. At this point the measuring device is set into the linear mode and the scan time is reduced.
